# SECTION I: Project Results Workplan

## PROJECT OBJECTIVE:
To provide guidance, methods and a toolbox for assessing and monitoring status and trends of land degradation using remote sensing technology which can be employed to inform land management and investment decisions as well as to improve reporting to the UNCCD and the GEF.

## COMPONENT 1: Methods for assessing and monitoring status and trends in land degradation

<td><strong>Activity 5: Process and verify commercial satellite data 50 cm mosaics for Senegal, Uganda, Kenya, and Tanzania.</strong></td>

<td>IS</td>
<td>We have run a complete high-resolution panchromatic mosaic (50cm) ahead of schedule (FY17Q2) over the entire country of Senegal (2002-2015) to evaluate and verify quality outputs. Results show issues with image contrast variation within the mosaic that could diminish their potential use of land degradation analysis. We have tested a new procedure that addresses and minimized these contrast issues and overall improves the quality of the mosaics. For efficiency, we added this module as an integral part of the mosaic proves to minimize additional computational time. Currently, we are reprocessing mosaic tiles for Senegal in order to obtain better land degradation results and improve the quality of the mosaics. Once Senegal is completed, we will process the other three countries individually. Due to the code improvement, hardware maintenance, and overall mosaic processing time, mosaics for entire countries will take a bout a month each to complete. Adding additional criteria and date will require further processing time.</td>

Activity 4: Engage the international scientific community through participation and presentations at scientific conferences and we will engage them in formal peer review of the toolbox and reports

Responsible party(ies): VS, NASA, Lund

NASA and VS teams are preparing to visit to Lund to review products.

Stephen Muwaya of the Project Steering Committee is helping Vital Signs present this project at an African stakeholder breakfast at the CRIC, which will include UNCCD Science and Technology Correspondents. Matt Cooper of Vital Signs will give the presentation.

The Steering Committee has established the Science Advisory Committee, which will conduct peer reviews of this project’s reports.
